DriveMaster 2012 With New and Improved Testing Features

DriveMaster is a ULINK product used for testing and validating storage devices that supports SATA and SAS product testing. The software is approved for use in the SATA-IO compliance test. It is used for validating hardware and software implementations for the product to carry the SATA-IO logo.

The 2012 version adds features for testing the enterprise PCIe SSD, SAS, TCG OPAL 2.0 and IEEE 1667 TCG Silo feature set. Driven by Microsoft eDrive, this new version can test the Microsoft new window security function.

TCG OPAL 2.0/eDrive Suite

Along with the release of DriveMaster 2012 ULINK is also introducing the Test Suite for the TCG OPAL 2.0 and Microsoft eDrive testing.

These products will help our customers speed up the adoption of the new security feature in the Windows 8 BitLocker hardware encryption.

Working with customers, ULINK now offers validation services for the TCG OPAL 2.0 and Microsoft eDrive. Based on ULINK's highly mature TCG Test Suite and proprietary testing methodology, this service can help customers produce more compliance devices.

Deliverables

- * Executive Summary of Pass/Fail Report
- * Detail Test Condition and Log Data for Review
- * Covers Instance and long time Regression

New Features Validation

- * Test OPAL 2.0 / IEEE 1667 new features

Confidential

- * Test is covered under a mutual NDA (None Disclosure Agreement)

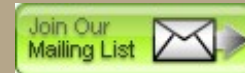

De-Bug and Retest
