

Greetings!

A screenshot of the ULINK Test Reporter web application. It shows a table with columns for test ID, test name, test date, test status, and test results. The table contains several rows of data, with some cells highlighted in green and others in red, indicating different test outcomes.

To save time and boost your productivity, **ULINK Test Reporter** is a software service tailored just for you and your team.

What is Test Reporter?

ULINK Test Reporter is a web-based software service designed to manage all ULINK DriveMaster test results. All test results are stored in the server. Users can automatically upload test results to a secure server and build a private test database. Based on selected criteria Test Reporter automatically presents the results on the web browser in various useful formats.

Why Does the DriveMaster user need the Test Reporter?

ULINK Test Reporter is designed for validation of storage devices such as Hard Disk Drive (HDD) and Solid State Drive (SSD). For storage manufacturers and system integrators, this service can create a test database, examine and compare the test results for quality assurance. Storage R&D teams can easily retrieve and compare the test results of hardware and firmware design changes and test engineers can easily compare the massive test results of different versions of the product.

Features:

- Collect thousands of test results in a database.
- Compare test results in the database with simple on-screen queries.
- Support all ULINK Test Suites' test results.
- Support additional user-defined test suite csv and log files.
- Display and compare test results with information such as pass, fail and not tested.
- Apply various filters such as date range to narrow down the comparison.
- Generate Templates for test suites and test suite versions for result parsing.
- List users, devices, test results, and test suites views for inspection.
