(D8-1-3-1-2) GenKey Effect in a transaction with endTransaction status = 1; The range's media encryption key backs to the value before	N/A
D9: Activate() Effect check	PASS
(D9-1-2-1-2) Activate to LockingSP if ATA security is enabled; Response - Status Code: 3Fh (Fail)	N/A
(D9-1-2-1-1) LockingSP.Activate() Condition: Activate to LockingSP if ATA security is disabled; Response - Pass	N/A
(D9-1-1-1-1) LockignSP.Activate() Conditon: Activate to LockingSP; Response - Pass	PASS
(D9-1-3-1-1) LockignSP.Activate() Effect: Check bit 1 of word 82; bit 1 of word 85 and all bits of word 89; 90; 92; 128 = 0	N/A
(D9-1-3-1-2) LockignSP.Activate() Effect: LockingEnabled bit = 1 from Level0_Discovery	PASS
(D9-1-3-1-3) LockignSP.Activate() Effect: LifeCycleState = 09h of LockingSP in the SP table	PASS

(D9-1-3-1-4) LockignSP.Activate() Effect: StartSession on LockingSP with SID's PIN; SyncSession - pass	PASS
(D9-1-3-1-5) LockignSP.Activate() Effect: Read and compare data - matching	PASS
(D9-1-3-2-1) LockignSP.Activate() Effect: LockingSP in mfg-inative - PIN for Admin1 is the same as the SID's PIN	PASS
(D9-1-3-3-1) LockignSP.Activate() Effect: LockingSP in mfg state - PIN for Admin1 does not change	PASS
D10: AdminSP.Revert() Effect check	PASS
(D10-1-1-1-1) AdminSP.Revert Grammar: Revert Session to AdminSP; Revert response - Pass	PASS
(D10-1-2-1-1) AdminSP.Revert Effect: The session within the AdminSP.Revert() was issued shall be aborted	PASS
(D10-1-2-1-2) AdminSP.Revert Effect: for ATA devices: check bit1 of word 82; bit1 of word 85; word 89; 90; 128	N/A
(D10-1-2-1-3) AdminSP.Revert Effect: LockingEnabled bit = 0 from Level0_Discovery	PASS
(D10-1-2-1-4) AdminSP.Revert Effect: The state of LockingSP is in OFS(Manufactured/Manufactured-Inactivate)	PASS
(D10-1-2-1-5) AdminSP.Revert Effect: StartSession on LockingSP; SyncSession - Status Code: != 0 or no data returned	PASS
(D10-1-2-1-6) AdminSP.Revert Effect: StartSession on AdminSP with MSID's PIN; SyncSession - pass	PASS
(D10-1-2-3-1) AdminSP.Revert Effect: LockingSP in inactive: Read and compare data - matching	PASS
(D10-1-2-2-1) AdminSP.Revert Effect: LockingSP in active: Read and compare data - matching/mismatching(DRMSpt=0/1)	PASS
(D10-1-2-2-2) AdminSP.Revert Effect: LockingSP in active: Data in DataStore table shall be the value in OFS	PASS
(D10-1-2-2-3) AdminSP.Revert Effect: LockingSP in active: Data in MBR table shall be the value in OFS	N/A
D10: LockingSP.Revert() Effect check	PASS
(D10-2-1-1-1) LockingSP.Revert Grammar: Revert Session to LockingSP; Revert response - Pass	PASS
(D10-2-2-1-1) LockingSP.Revert Effect: The session remains open after issuing Locking.Revert()	PASS

(D10-2-2-1-2) LockingSP.Revert Effect: for ATA devices: check bit1 of word 82; bit1 of word 85; word 89; 90; 128   N/A

(D10-2-2-1-3) LockingSP.Revert Effect: LockingEnabled bit = 0 from Level0_Discovery   PASS

(D10-2-2-1-4) LockingSP.Revert Effect: LifeCycleState = 08h (Manufactured-Inactivate)   PASS

(D10-2-2-1-5) LockingSP.Revert Effect: StartSession on LockingSP; SyncSession - failed (Status Code: != 0 or no data returned)   PASS

(D10-2-2-3-1) LockingSP.Revert Effect: LockingSP in inactive: Read and compare data - matching   PASS

(D10-2-2-3-2) LockingSP.Revert Effect: LockingSP in inactive: Data in DataStore table shall be the value in OFS   PASS

(D10-2-2-3-3) LockingSP.Revert Effect: LockingSP in inactive: Data in MBR table shall be the value in OFS   N/A

(D10-2-2-2-1) AdminSP.Revert Effect: LockingSP in active: Read and compare data - matching/mismatching(DRMSpt=0/1)   PASS

(D10-2-2-2-2) LockingSP.Revert Effect: LockingSP in active: Data in DataStore table shall be the value in OFS   PASS

(D10-2-2-2-3) LockingSP.Revert Effect: LockingSP in active: Data in MBR table shall be the value in OFS   N/A

D10: RevertSP() Effect check   PASS

(D10-3-1-1-1) LockingSP.RevertSP Grammar: RevertSP wothout parameters; RevertSP Response Pass   PASS

(D10-3-2-1-1) LockingSP.RevertSP Condition: RevertSP if 'KeepGlobalRangeKey' = 1 and read-unlocked/write-unlocked for the Locking GlobalRange; RevertSP Response - Pass   PASS

(D10-3-2-1-1) LockingSP.RevertSP Condition: RevertSP if 'KeepGlobalRangeKey' = 1 and read-unlocked for the Locking GlobalRange; RevertSP Response - Pass   PASS

(D10-3-2-1-1) LockingSP.RevertSP Condition: RevertSP if 'KeepGlobalRangeKey' = 1 and write-unlocked for the Locking GlobalRange; RevertSP Response - Pass   PASS

(D10-3-2-1-2) LockingSP.RevertSP Condition: RevertSP if 'KeepGlobalRangeKey' = 1 and read and write-locked for the Locking GlobalRange; RevertSP Response - Fail(3Fh)   PASS

(D10-3-3-1-1) LockingSP.RevertSP Effect: The session shall be aborted: Get_Rqs for LifeCycleState after RevertSP() is successful; Get_Rsp - no data returned   PASS

(D10-3-3-1-2) LockingSP.RevertSP Effect: for ATA devices: check bit1 of word 82; bit1 of word 85; word 89; 90; 128	N/A
(D10-3-3-1-3) LockingSP.RevertSP Effect: LockingEnabled bit = 0 from Level0_Discovery	PASS
(D10-3-3-1-4) LockingSP.RevertSP Effect: LifeCycleState = 08h (Manufactured-Inactivate)	PASS
(D10-3-3-1-5) LockingSP.RevertSP Effect: StartSession on LockingSP; SyncSession - Status Code: != 0 or no data returned	PASS
(D10-3-3-2-1) LockingSP.RevertSP Effect: LockingSP in active: KeepGKey=1 and data covered by GlobalRange; Data shall not change	PASS
(D10-3-3-2-3) LockingSP.RevertSP Effect: LockingSP in active: KeepGKey=0; Data shall not change/change(DRMSpt=0/1)	PASS
(D10-3-3-2-4) LockingSP.RevertSP Effect: LockingSP in active: Data in DataStore table shall be the value in OFS	PASS
(D10-3-3-2-5) LockingSP.RevertSP Effect: LockingSP in active: Data in MBR table shall be the value in OFS	N/A
D9-D10 Activate and Revert: ATA command check in RestrictedCommands table	N/A
(D9-1-3-1-6) RestrictedCmds: ATA command check after LockingSP.Activate	N/A
(D10-3-3-1-6) RestrictedCmds: ATA command check after LockingSP.RevertSP	N/A
(D10-2-2-1-6) RestrictedCmds: ATA command check after LockingSP.Revert	N/A
(D10-1-2-1-7) RestrictedCmds: ATA command check after AdminSP.Revert	N/A
D11: Power Cycle	PASS
(D11-1-1-1-1) C_PIN: after power cycle 1.if Persistence=1 Tries=no change ; 2.if Persistence=0 Tries=0	PASS
(D11-2-1-1-1) RestrictedCmds: Next()/Get() to get the cell contents	N/A
(D11-2-1-1-1) RestrictedCmds: Allowed column check after power cycle	N/A
Revert LockingSP	PASS
Start Session with HostChallenge - AdminSP	PASS
Sync Session - AdminSP	PASS
LockingSP.Revert - Request	PASS
LockingSP.Revert - Response	PASS
End Session - Request	PASS
End Session - Response	PASS

** Opal V2.0 - Generic **

Protocol 2 Command Test	N/A
Check Get_ComID command	N/A
Check Verify_ComID_Valid command	N/A
Check Get_ComID_Rsp command	N/A
Check SSC information	PASS
Identify the device type from the TPerInfo table	PASS
Check the support of OPAL SSC v2.00	N/A
Verify Geometry information	PASS
Geometry Reporting Feature returned from Level0_Discovery	N/A
Contents of column 07-0Ah returned from the LockingInfo table	PASS
Verify Geometry Info between LockingInfo table and Level0_Discovery	N/A
TPer Reset Command Test	PASS
Check the support of TPer_Reset command	PASS
If TPer_Reset is disabled; Issue TPer_Reset - aborted	PASS
Enable TPer_Reset command: set ProgrammaticResetEnable=1 in the TPerInfo table	PASS
All open session SHALL be aborted on all ComID	PASS
All uncommitted transactions SHAll be aborted on all ComID	PASS
The synchronous protocol stack for all ComID SHAll be reset to its initial state	PASS
All related method processing occurring on all ComIDs SHALL be aborted	PASS
Host's communications capabilities SHAll be reset to the initial minimum assumptions	PASS
Read/WriteLocked = True for all Locking objects if the LockOnReset = Programmatic enumeration value	PASS
Done = False in MBRControl table if the DoneOnReset = Programmatic enumeration value	N/A
Check Read/WriteLocked for all Locking objects before and after TPer_Reset is disabled	PASS
Check Done in the MBRControl table before and after TPer_Reset is disabled	N/A
Stack Reset Test	PASS
Check the support of Stack_Reset command	PASS

The data returned from Stack_Reset rsponse - Get_ComID_Rsp	PASS
All open session for that ComID SHALL be aborted	PASS
All uncommitted transactions SHALL be aborted	PASS
All related method on that ComID SHALL be aborted	PASS
The protocol stack for all ComIDs SHALL be reset to its initial state	PASS
All communications properties SHALL be reset to their default values	PASS
No Response Available if no Handle_ComID_Request command preceded the Get_ComID_Response	PASS
Check 'ReadLocked' and 'WriteLocked' values in Locking table	PASS
Check 'Done' value in MBRControl table	N/A
Stack_Reset with non-zero reserved byte; It shall be ignored by both host and device	PASS
Revert LockingSP	PASS
Start Session with HostChallenge - AdminSP	PASS
Sync Session - AdminSP	PASS

Authenticate - User1 with incorrect optional param; Authenticate Response - StatusCode = 0Ch(Invalid_Param)	PASS
Check Random method	PASS
Check the support of Random method - AdminSP	PASS
Random Request with count < 20h in AdminSP; Random Response - Success	PASS
Random Request with count = 20h in AdminSP; Random Response - Success	PASS
Random Request with count > 20h in AdminSP; Random Response - Success or StatusCode=0Ch(Invalid_Param)	PASS
Check the support of Random method - LockingSP	PASS
Random Request with count < 20h in LockingSP; Random Response - Success	PASS
Random Request with count = 20h in LockingSP; Random Response - Success	PASS
Random Request with count > 20h in LockingSP; Random Response - Success or StatusCode=0Ch(Invalid_Param)	PASS
Alignment LBA Test	N/A
RangeStart/Length: Aligned; Response - Pass	N/A
RangeStart: RangeStart !=0 and startAlignment !=0; Response - Status Code: 0Ch(Invalid_Prams)	N/A
RangeLength: RangeStart =0; RangeLength !=0 and LengthAlignment !=0; Response - Status Code: 0Ch(Invalid_Prams)	N/A
RangeLength: RangeStart !=0; RangeLength !=0 and LengthAlignment !=0; Response - Status Code: 0Ch(Invalid_Prams)	N/A

Data Alignment Restriction on Byte Table - DataStore	PASS
Get MandatoryWriteGranularity and RecommendedAccessGranularity of DataStore from Table table	PASS
MandatoryWriteGranularity of DataStore SHALL be less than or equal to 8192	PASS
Set data(lengthMWriteGran!=0) into DataStore table; Response - Status Code: 0Ch(Invalid_Param)	N/A
Set data(offsetMWriteGran!=0) into DataStore table; Response - Status Code: 0Ch(Invalid_Param)	N/A
Set data(offsetMWriteGran=0 and lengthMWriteGran=0) into DataStore table; Response - Pass	PASS
Get and Compare data from DataStore - Matching	PASS
Data Alignment Restriction on Byte Table - MBR	N/A
Get MandatoryWriteGranularity and RecommendedAccessGranularity of MBR from Table table	N/A
MandatoryWriteGranularity of MBR SHALL be less than or equal to 8192	N/A
Set data(lengthMWriteGran!=0) into MBR table; Response - Status Code: 0Ch(Invalid_Param)	N/A
Set data(offsetMWriteGran!=0) into MBR table; Response - Status Code: 0Ch(Invalid_Param)	N/A
Set data(offsetMWriteGran=0 and lengthMWriteGran=0) into MBR table; Response - Pass	N/A
Get and Compare data from MBR table - Matching	N/A
AdminSP.Revert() Effect check	PASS
AdminSP.Revert with 'Behavior of C_PIN_SID PIN on TPer Revert'=0 or 1: Revert response - pass	PASS
'Behavior of C_PIN_SID PIN'=0: PIN = C_PIN_MSID and 'Initial C_PIN_SID'=0	PASS
Data Removal Mechanism	PASS
Pyrite 2.00/2.01: Overwrite Data Erase or Block Erase SHALL be supported	PASS
Pyrite 2.00/2.01: Crypto Erase bit SHALL be set to 0	PASS
Pyrite 2.00/2.01: Bit6/7(Reserved) in Byte6/7 are zero	PASS
Check the support of DataRemovalMechanism table	PASS
Get Request on ActiveDataRemovalMechanism of the DRM table; Get Response: Pass	PASS

Set on supported ActiveDRM of the DRM table; Get the activeDRM which matches the value in Set	PASS
Set Request on unsupported ActiveDRM; Set Response: StatusCode=0Ch(Invalid_Param)	PASS
Test Start/SyncSession with Optional Parameter: SessionTimeout	PASS
StartSession - SessionTimeout; SyncSession - Pass(supported)/Fail(not supported)	N/A
StartSession - SessionTimeout: less than SPSessionTimeout from the SPInfo table; SyncSession - Pass	N/A
StartSession - SessionTimeout: greater than SPSessionTimeout from the SPInfo table; SyncSession - Fail	N/A
StartSession - SessionTimeout: greater than MaxSessionTimeout from Property; SyncSession - Fail	N/A
StartSession - SessionTimeout: less than MinSessionTimeout from Property; SyncSession - Fail	N/A
StartSession - SessionTimeout: zero with MaxSessionTimeout=0/non-zero; SyncSession - Pass/Status Code=0Ch(Invalid Param)	N/A
Session Timeout: Start/Sync Session after a session aborted due to the session timeout during traffic - Pass	PASS
Hardware Reset tests on LockOnReset/DoneOnReset	N/A
Locking table: Set Hardware Reset to 'LockOnReset' column	N/A
Locking table: Set Read/WriteLockEnabled to True and Read/WriteLocked to False	N/A
Locking table: Issue Hardware Reset	N/A
Locking table: Verify Read/WriteLocked = True after Hardware Reset	N/A
MBRControl table: Set Hardware Reset to 'DoneOnReset' column	N/A
MBRControl table: Set Enable/Done to True/False	N/A
MBRControl table: Issue Hardware Reset	N/A
MBRControl table: Verify Done = True after Hardware Reset	N/A
Revert LockingSP	PASS
